I was further informed, That from the time of that great Tunder clap both the Thunder and Lightning diminiſh'd gradually, ſo that in an Hours time all was ſtill and quiet again.

III. *Part of a Letter from Dr.* Archibald Adams, *to Dr.* Hans Sloane, *R. S. Secr. concerning an Apoplectick Perſon, in whom, from an Obſtruction in the Left Ventricle of the Brain, the Nerves on the Oppoſite ſide were affected.*

Norwich, February 18. 1707.

SOME time ago I opened the Head of a Woman who dy'd of an Apoplexy, and in the left Ventricle of the Brain I found betwixt four and five Ounces of clottered Blood, in the right Ventricle no Blood at all, but every thing as uſual; and all the Nerves which commanded the right ſide of the Body were as ſtrong as any I ever obſerv'd in a ſound Animal, eſpecially in their Origin, and as far as I could trace them in their courſe. It was my Opinion, that which ever Ventricle the Obſtruction was in, the Nerves and Muſcles correſponding to that ſide were affected, but here the contrary appear'd plainly; for altho' the Obſtruction was in the left Ventricle, yet the ſenſe and motion of the right ſide were intirely loſt, and the ſmall remains of either were obſervable in the left ſide.
